

Where the Perfect Wood Finish Begins!

Create a Clean Work Area, No Dust, No Flies

Dust and flies can drive a finisher totally crazy. When dust and flies land on newly finished surfaces they get stuck there forever. The only solution is to sand the surface again and recoat it. The finisher is aggravated. Time and coatings are wasted.

Steps need to be taken to avoid this irritating situation. Some finishers have a spray booth with exhaust fans that keep the spraying area clean. Up until now, those without a spray booth would find that the best way to keep dust down was to put cloths or plastic on the floor and on neighboring surfaces.

But now there is a new way to provide a clean area and a protected environment. The Finishing Store recommends The Z-Pro Ready Wall, an easy way to create a clean working space anytime, anywhere. Just choose an area within your workspace, set up the poles, attach the plastic, and in just a few minutes, a clean work area is created.

The Z-Pro Ready Wall can be set up anywhere the job is. If you are spraying a built-in bookcase, just set up the walls and you have a clean space with no chance of any overspray getting into the rest of the room. It's an excellent way to confine the dust when you are sanding. And since flies can't walk through walls, you're safe from them, too.

Dust and flies can cost you time and money; the Z-Pro Ready Wall is an easy, inexpensive way to deal with the problem, permanently.

It's always good to know your work won't be messed up by uninvited guests.
